Claims 1-41 are pending.

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1 and 2 to the extent that the claims are drawn to a nucleic acid encoding a tocopherol cyclase active in the cyclization of 2,3-dimethyl-5-phytylplastoquinol to tocopherol, classified in Class 536, subclass 23.2, for example.
- II. Claims 1 and 3 to the extent that the claims are drawn to a nucleic acid encoding a tocopherol cyclase active in the cyclization of 2,3-dimethyl-5-geranylgeranylplastoquinol to tocotrienol, classified in Class 536, subclass 23.2, for example.
- III. Claims 1 and 4-9 to the extent that the claims are drawn to a tocopherol cyclase gene from eukaryotes, classified in Class 536, subclass 23.2, for example.
- IV. Claims 1 and 10-12 to the extent that the claims are drawn to a tocopherol cyclase gene from prokaryotes, classified in Class 536, subclass 23.7, for example.
- V. Claims 13-16, 18, 19 and 21 to the extent that the claims are drawn to a construct comprising a tocopherol cyclase gene from eukaryotes, classified in Class 435, subclass 320.1, for example.
- VI. Claims 1, 2, 4, 8, 10-15 and 17-23 to the extent that the claims are drawn to a tocopherol cyclase gene from procaryotes, classified in Class 435, subclass 320.1, for example.
 - VII. Claim 20 drawn to feed, classified in Class 426, subclass 615, for example.
 - VIII. Claims 22-25 drawn to oil, classified in Class 426, subclass 601, for example.

-3-

Serial No. 09/688,069 Art Unit 1638

IX. Claims 26-41 to the extent that the claims are drawn to a method of producing tocopherol in a cell, classified in Class 435, subclass 69.1, for example.

X. Claims 26-41 to the extent that the claims are drawn to a method of producing tocotrienol in a cell, classified in Class 800, subclass 281, for example.

The inventions are distinct, each from the other because of the following reasons:

Applicants are reminded that nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.

In addition, each of the inventions of Groups I-X are patentably distinct. The genes of Groups I-IV are each distinct chemical compounds that differ in structure and/or function one from each of the others. In addition, the constructs of Groups V and VI are distinct chemical compounds that differ in structure and/or function one from the other, and the constructs of Groups V and VI are distinct from the genes of each of Groups I-IV, given that the genes of Groups I-IV can be used separately from use in a construct for expression in a cell, such as for hybridization to tocopherol cyclase sequences, for example. In addition, the feed of Group VII and the oil of Group VIII are each distinct chemical compositions one from

the other, wherein one is not required by the other, and each is distinct from each of the nucleic acids of Groups I-VI, which are chemically, structurally and functionally distinct. Furthermore, the methods of Groups IX-X are distinct one from each other, wherein each uses different genes and each results in a distinct product. In addition, the methods of Groups IX-X are distinct on from the products of each of Groups I-VIII, wherein each of the products can be used in a different method, such as the genes may be used for hybridization or for synthesis of the enzymes, and the oil and feed are not required for the claimed methods. Therefore, the inventions of Groups I-X are capable of being separately made, independently used and the patentability one would not render either of the other obvious or unpatentable.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown for their different classification and the requirement for additional areas of search restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

Serial No. 09/688,069 -5Art Unit 1638

Any inquiry concerning this commu

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth F. McElwain whose telephone number is (703) 308-1794. The examiner can normally be reached on Monday through Friday from 8:00 AM to 4:30 PM.

5

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amy Nelson, can be reached at (703) 306-3218. The fax phone number for this Group is (703) 308-4242. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989).

10

Any inquiry of a general nature or relating to the status of this application should be directed to the legal analyst, Gwendolyn Payne, whose telephone number is (703) 305-2475, or to the Group receptionist whose telephone number is (703) 308-0196.
